WORKTRACKER – TEST CLOSURE REPORT

1. Project Information

Item	Details
Project Name	WorkTracker
Testing Type	Manual Testing
Prepared By	QA Tester
Application Type	Web Application
Browser	Google Chrome
Operating System	Windows 11

2. Testing Objective

The objective of testing was to verify that the WorkTracker application functions as expected and meets the defined functional requirements.

The testing focused on validating the major user-facing features of the application and ensuring that the expected user workflows were working correctly.

3. Testing Completion

All planned testing activities have been completed successfully.

The following activities were completed:

- Test Plan
- Test Scenarios
- Test Cases
- Requirement Traceability Matrix (RTM)
- Test Execution
- Defect Reporting
- Defect Screenshot
- Defect Summary
- Test Summary Report

4. Test Execution Result

Metric	Result
Total Test Cases	179
Test Cases Executed	179
Passed	178
Failed	1
Blocked	0
Not Executed	0

Execution Percentage	100%
Pass Percentage	99.44%
Fail Percentage	0.56%
Defects Identified	1
Defect Status	Open

5. Modules Tested

The following modules were covered during manual testing:

- Registration
- Login
- Overview
- Employees
- Attendance
- Leaves
- Salary
- Tasks
- Feedback
- Profile
- Logout

6. Defect Status

During the execution of the planned test cases, one defect was identified and reported to the development team. However, the defect was not fixed during the testing period and remains open at the time of test closure.

7. Closure Criteria

The testing process is considered complete because:

- All planned test cases were executed.
- Test execution results were documented.
- The identified defect was recorded and reported to the development team.
- RTM was completed.
- Test Summary Report was prepared.
- All planned testing activities were completed.

8. Enhancement Recommendations

During the testing of the WorkTracker application, one defect was identified and remains unresolved because the development team has not implemented the required fix. The remaining test results and observations have been documented.

The following enhancements may be considered in future releases to improve the application's usability, functionality, and overall user experience:

Enhanced Task Management: Introduce task prioritization, deadlines, and reminders to improve productivity.

Improved Dashboard and Reporting: Provide detailed dashboards and reports to track work progress, task completion, and overall productivity.

Enhanced User Interface: Improve responsive design and navigation to provide a consistent experience across desktop, tablet, and mobile devices.

Advanced Time Tracking: Introduce additional time-tracking options to record working hours and monitor time spent on tasks.

Notification Enhancements: Provide timely notifications for task assignments, approaching deadlines, and task status updates.

These recommendations are proposed enhancements for future releases and are separate from the unresolved defect, which requires appropriate corrective action

9. Final Conclusion

The WorkTracker application has completed the planned manual testing activities. A total of 179 test cases were executed. One defect was identified and reported to the development team; however, it remains unresolved at the end of the testing period.

The test execution results, identified defect, and related observations have been documented. The Requirements Traceability Matrix (RTM) and Test Summary Report have been completed.

The application was evaluated against the expected functional requirements within the tested scope. However, the outstanding defect must be reviewed by the relevant stakeholders to determine its impact and whether the application can be accepted for release.

Based on the completed testing activities, the testing execution phase is complete. The unresolved defect remains open and requires follow-up with the development team.

Final Test Status: NOT FULLY PASSED — 1 OPEN DEFECT

Testing Execution Status: COMPLETED
